

Hino 500 Series REAR DIFFERENTIAL LOCKER

LDS NoSpin Differential Locker provides a fully locked rear axle that automatically unlocks when wheel speeds are mismatched, such as going around a corner or a roundabout. Allows for maximum traction to both rear wheels to prevent the loss of drive when the vehicle encounters slippery or uneven surfaces, it locks both side wheels on the drive axle in both forward and reverse.

Locked Drive Systems has designed their units to suit many makes and models, used in applications such as Mining, Emergency, Utilities, Crane Trucks, Construction, Military, Agriculture & Forestry. An important feature of these lockers is their ease of installation.

Suitable for popular models in the range.
