

FUSO FIGHTER REAR DIFFERENTIAL LOCKER

The Fuso Fighter has on offer an impressive range of options across a multitude of applications, from Transport, Council and Utilities through to Building and Construction vehicles.

At LDS we have developed a NoSpin Rear Diff Locker to enhance the vehicles capability, does not require air, or electrical current to operate. Drivers are not required to select prior to approaching difficult terrain.

Our NoSpin Rear Diff Locker maintains maximum traction to both rear wheels to prevent loss of drive when the vehicle encounters slippery or uneven surfaces, it locks both sides on the drive axle to keep the vehicle moving forward. An enhanced feature of the LDS NoSpin is that it allows one side wheel to unlock when wheels speeds are mismatched, such as going around a corner or a roundabout.

Developed from an Eaton base unit our range has evolved to cover most popular makes and models, one of the most important features of the NoSpin Locker is their ease of installation.

Suitable for popular
Models such as the
FK, FM and FN

Estimated Fitting Time For Most Models 4-6 Hours
